Sottosopra system

› TIPOLOGIA SOTTOSOPRA

Sottosopra features

Gli elementi del sistema Sottosopra hanno rivestimento completamente sfoderabile, sono strutturati su cubi in acciaio autoportanti e rete in tubo d'acciaio verniciato con polveri epossidiche, di colore grigio, con piano ortopedico a doghe curvate in multistrato, inserite mediante apposite guaine silenzianti. Disponibile anche con secondo letto estraibile o cassettoni.

All Sottosopra products have removable covers on self-supporting steel cubes and base in steel tube coated with epoxy powders in grey. Orthopaedic bed base with plywood curved slats inserted using special noise-reducing covers. Additional pull-out bed base or drawers available.

Deep Cleaning®

Bside

LA TECNOLOGIA SAMOA PER UN PULITO PROFONDO.

Deep Cleaning® è l'innovativo ciclo di lavorazione che consente di accoppiare, con particolari cuciture, tessuti ed ecopelli a materiali tecnici in fibra di poliestere, dando origine ad un prodotto ideale per sfoderare contemporaneamente rivestimenti ed imbottiture dei letti.

PULITO ANCHE DENTRO CON LA SFODERABILITÀ ABBINATA.

La sfoderabilità abbinata dà la possibilità di igienizzare in profondità i prodotti, permette di arieggiare l'imbottitura, accoppiata a tutte le tipologie di tessuto ed ecopelli, mantiene inalterata le proprietà dei tessuti antimacchia, ma soprattutto, qualora le caratteristiche di lavaggio dei tessuti lo consentano, rende possibile lavare in acqua o lavatrice i rivestimenti con l'imbottitura.

Per sfruttare completamente la tecnologia Deep Cleaning®, si consiglia di consultare le modalità di lavaggio dei tessuti e di scegliere tessuti irstringibili, antimacchia, lavabili in acqua e lavatrice.

THE DEEP-CLEANING TECHNOLOGY BY SAMOA.

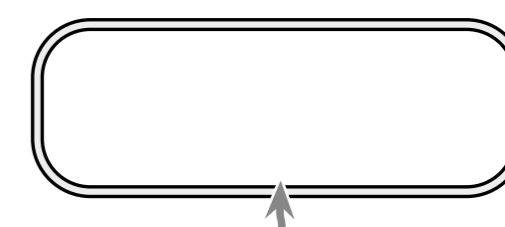

Deep Cleaning® is an innovative production process that allows to pair faux leather and fabrics to technical materials in polyester fiber, to give birth to a product ideal to simultaneously pull off the upholstery and padding of the beds.

DEEPER CLEANING WITH THE COMBINED REMOVEABILITY.

The combined removeability gives the possibility to deeply sanitize the products, allows the aeration of the padding coupled to all types of fabric and eco-leather, it retains unaltered the properties of stain resistant fabrics, but above all, if the washing properties of fabrics permit it, it can be washed with padding in water or washing machine.

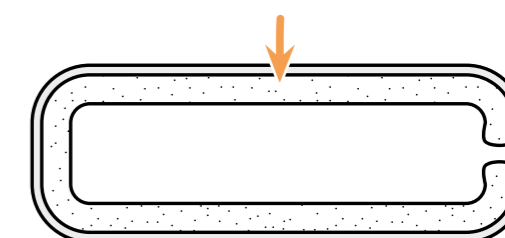

To fully exploit the Deep Cleaning® technology please refer to the fabrics washing procedures and choose unshrinkable, stain resistant, washable fabrics.

METODO TRADIZIONALE

rivestimento in tessuto sfoderabile

imbottitura in fibra di poliestere accoppiata a rivestimento in tessuto sfoderabile
